TECHNICAL SKILLS

Backend
Go, PHP, Python, Shell, APIs, services, workers, CLIs, service boundaries, integration layers

Infrastructure & Platform
Kubernetes, Docker, Helm, ArgoCD, Argo Workflows, Argo Events, Terraform, AWS, private cloud, OpenStack, Cilium, Vault/Consul, Harbor, Nexus

CI/CD & Automation
GitLab CI, Jenkins, deployment automation, merge-request automation, artifact workflows, release guardrails, operational tooling

Data & Messaging
MySQL, PostgreSQL, Redis, RabbitMQ, Kafka, NATS, Cassandra, ClickHouse, Elasticsearch, MongoDB

Observability & Reliability
Prometheus, Grafana, metrics, logging, readiness checks, operational dashboards, rollout safety, production feedback loops

Architecture
System design, reliability engineering, automation strategy, modular architecture, domain boundaries, technical review, engineering standards

EDUCATION

BSc Computer Software Engineering
Islamic Azad University · 2011 — 2015

ASc Computer Programming
Islamic Azad University · 2008 — 2011

References available on request.

SUMMARY

Systems & Infrastructure / Platform Engineer with a backend engineering background and production experience across Kubernetes-based infrastructure, CI/CD, automation, observability, reliability, and distributed systems. I focus on building and improving platforms that make delivery safer, operations clearer, and backend systems easier to maintain.

My engineering style is calm, structured, and operationally mature: clarity over ambiguity, automation over repeated manual work, maintainability over short-term fixes, and reviewable architecture over accidental complexity. I contribute best through platform ownership, backend architecture, deployment reliability, technical review, and sustainable engineering practices.

CORE EXPERTISE

Platform Engineering: Internal platforms, production infrastructure, deployment reliability. Kubernetes-based production systems, Helm-based packaging, ArgoCD/GitOps delivery, private cloud environments, and platform workflows that support engineering teams. Strong focus on reliability, operational clarity, safe rollout patterns, and reducing friction in developer delivery paths.

Backend Systems: Go services, APIs, distributed systems, messaging. Backend services, APIs, workers, CLIs, service boundaries, integration layers, and data flows with particular strength in Go-based systems. Practical experience with messaging and data systems such as Redis, RabbitMQ, Kafka, NATS, MySQL, PostgreSQL, Cassandra, ClickHouse, Elasticsearch, and MongoDB.

CI/CD & Automation: Pipelines, operational tooling, infrastructure workflows. GitLab CI, Jenkins, deployment automation, merge-request automation, release guardrails, artifact workflows, and internal developer tooling. Automation mindset: make repeated operational work safer, easier to review, and easier for teams to understand.

Reliability & Observability: Metrics, monitoring, rollout safety, production debugging. Observability and reliability work using metrics, logs, readiness checks, dashboards, production feedback loops, and deployment hardening. Comfortable investigating system behaviour across application, infrastructure, pipeline, and database layers.

Architecture & Technical Leadership: System design, review, standards, operational improvements. Architecture review, service-boundary design, platform decision-making, engineering standards, mentoring, and technical ownership. Career progression from backend engineer to team lead and infrastructure/platform engineer, with increasing responsibility for system design and operational complexity.

EXPERIENCE

Adyen
Jul 2023 — Present

Infrastructure Engineer — CI/CD & Platform · Amsterdam, Netherlands

- Designed and improved production CI/CD and platform tooling around Kubernetes-based delivery workflows, with attention to deployment reliability and operational clarity.
- Worked with Helm, ArgoCD, Argo Workflows, GitLab/Jenkins integrations, artifact systems, and internal automation to make delivery paths safer and easier to operate.
- Built and maintained Go-based developer/platform tooling, including CLI and service integrations for controlled plugin execution and workflow automation.
- Improved deployment hardening, observability, and operational feedback loops so teams could understand merge requests, releases, logs, metrics, and post-deployment behaviour more clearly.
- Collaborated across teams on review, architecture, reliability concerns, and practical automation for production infrastructure.

Studocu
Jul 2022 — Jul 2023

Senior Software Engineer · Amsterdam, Netherlands

- Improved backend and platform-facing areas around website performance, crawler accessibility, and production reliability.
- Worked with operations and platform teams to add monitoring across local, staging, and production environments.
- Built CI/CD checks for SEO and performance testing to make release quality more repeatable and easier to validate.
- Investigated bottlenecks across application and database layers and translated findings into practical engineering improvements.

KolayIK
May 2021 — May 2022

Senior Software Engineer / Backend Team Lead · Istanbul, Turkey

- Led backend and platform-oriented work across HR systems, expense management, data import/export, and queue-based services.
- Applied modular architecture, domain boundaries, TDD, messaging, AWS services, and Kubernetes where appropriate to improve maintainability and operational behaviour.
- Built automation for failure reporting and operational feedback, including queue handling and Slack-integrated reporting.
- Supported delivery through technical review, design direction, mentoring, and pragmatic engineering standards.

Wingie Enuygun Group
May 2020 — Apr 2021

Senior Software Engineer / Team Lead · Istanbul, Turkey

- Led hotel-provider integration work and backend services for provider aggregation, search, caching, and data pipelines.
- Designed Go/gRPC services to manage concurrent provider requests and standardise hotel data from external systems.
- Improved reliability through testing practices, Elasticsearch tuning, cache-rate management, and database cluster migration work.
- Guided the team through technical review, testing workshops, and delivery decisions that balanced reliability with business needs.

Insider

Jun 2019 — Jun 2020

Senior Software Engineer · Istanbul, Turkey

- Refactored newsletter and email-delivery systems from legacy structures toward clearer service boundaries.
- Worked on Go services, messaging, security remediation, and data migration across high-volume marketing data systems.
- Improved maintainability through architecture review, repository-service patterns, and clearer data-flow design.
- Built supporting services for A/B testing, spam detection, and queue-based processing.

Bamilo

Aug 2015 — Apr 2019

Senior Software Engineer / Head of Development · Tehran, Iran

- Built and led engineering work across seller tooling, warehouse operations, delivery tracking, inventory services, and internal platforms.
- Owned backend architecture, service design, team growth, and technical review for marketplace operations systems.
- Designed data migration pipelines and service improvements for inventory and seller-centre workflows.
- Helped convert operational problems into maintainable systems for logistics, warehouse, seller, and marketplace teams.

Sepehr Mahan Tech

Aug 2012 — Jul 2015

Software Engineer / Senior Software Engineer · Tehran, Iran

- Developed suggestion, task-management, meeting-management, form-builder, workflow, social-network, and mobile API systems.
- Focused on backend services, process automation, maintainable application foundations, and practical delivery for private and public-sector clients.
- Built the early backend and product-engineering foundation that later grew into larger platform, architecture, and leadership responsibilities.

SELECTED PROJECTS

Pepper.com Platform Work

Marketplace microservices work · Remote / Berlin

Backend services, GraphQL flows, image service work, near-cache behaviour

- Collaborated with Supernova and microservice teams to develop features, maintain services, and improve backend behaviour.
- Redesigned and developed deal submission, product listing, and product detail flows using GraphQL.
- Worked on image-service capabilities, near-cache behaviour, load-balancing improvements, and microservice security review.

RECOMMENDATIONS

Nikola Barac — Head of Software Engineering, Pepper.com
“Kousha worked on pepper.com features as a senior PHP developer and took ownership of one of our most important microservices written in Go. He demonstrated passion for tackling challenging problems, staying o hours until they got solved and following up the next days. While working on his daily tasks he was often paying attention to security issues that many developers often neglect. Kousha was a valuable team member and I would be very happy to work with him again!”

Ryan Klann — VP of Engineering, Pepper.com
“Kousha is a developer who has very strong technical skills and has shown to be able to take responsibility for a project and be relied upon. If there is something technical that he doesn't understand he will jump right in and learn what he needs in order to solve the problem. It's been a pleasure working with you.”

Hooman Moghani — Product Manager, Insider
“Kousha is amazing at his job! He is one of the most brilliant engineers that I've worked with, one of the best in his field, and is always willing to share best practices. He was always very committed and focused on delivering on time. He was a top performer and inspired us to give our best. Anyone would be lucky to have Kousha as a colleague.”
